SNOWMAGEDDON

No. 5: Feb. 5-6, 2010

(Baltimore Sun Staff/Karl Merton Ferron)

The first of the two back-to-back "Snowmageddon" storms was the larger of the pair, dropping 25 inches at BWI. Unable to use transportation or walk on sidewalks, Jackie Sansone heads for work, following the packed-down path of a vehicle on Monument St to reach St Paul St. Feb. 6, 2010

Reaped by students

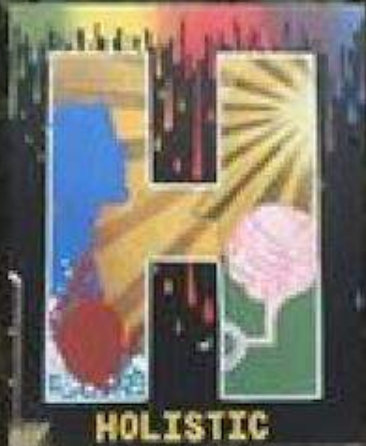

“What we stand for today is the greener grass others will tread on tomorrow. As pioneers to our young campus, we are securing the roots of a flourishing student community with passion for Knowledge, Creativity and Life.”

malaymail

"We were once writing a vectorizing compiler in Lund in a computer design course with everything from compiler, simulator, to VLSI implementation. During that very intensive spring Napi created only one single bug but it took one week to find because nobody thought it was in Napi's code (for good reasons...). When Napi realized it was in his code, he made a printout, lit a cigarette and re-read his code very focused.

After one hour, without going to a computer, he announced that he had found it. He corrected it in a minute or so, it worked of course, and then he made no more bugs..... "

Jonas Skeppstedt on Mohd Hanafiah (Napi) Abdullah's computer programming skills

Axiomatic Multiplatform C to Java Compiler

AXIOMATIC
SOLUTIONS SDN BHD

From: napi@cs.indiana.edu (Mohd Hanafiah Abdullah)
Newsgroups: comp.compilers
Date: 13 May 2005 18:02:37 -0400
Organization: Axiomatic Solutions Sdn Bhd
Keywords: C, Java, available

Axiomatic Solutions Sdn Bhd announces the availability of AMPC version 1.2. You can purchase AMPC online now at:
<http://www.axiomsol.com/hedesu/shopping/index.php>

Major Changes

Version 1.2 supports the MS Windows XP platform, beside Linux x86 and Mac OSX. It also supports the DOUBLE floating point type. Please see the README file for details on DOUBLE floating point type.

AMPC (Axiomatic Multi-Platform C) is a C compiler/IDE targeting the JVM (generates Java Bytecode). The resulting .class executables will be able to run on any Java Virtual Machine (tm). AMPC enables programmers to write/port applications using C targeting the JVM, thus, opening up a whole new market dimension vis-a-vis JVM-enabled devices such as desktop systems, PDAs, cell-phones, game consoles, set-top boxes, automotive systems (GPS based displays, OnStar, Satellite radio systems, etc), and so forth. AMPC can also be used to turn legacy applications written in C into JVM applications, with a single source base to manage. Use existing C skill sets instead of learning new Java skill sets.

Why?

1.
Set goals &
Put in effort.

2.
Greatness comes
in all shapes and
sizes.

3.
Take charge.

"Nothing is difficult.
Only more complex."

THANK YOU

In memory of
